

SIT725 TASK 1.3P

As a VR (Virtual Reality) Developer, I want to establish myself as a specialist in creating immersive and innovative VR experiences. My website will display my work, such as VR games, simulations, and educational tools. Users can sign up to access unique VR content and join virtual workshops. I'll provide consulting services for VR projects, guiding clients from the initial idea to the final product, ensuring they get a specific solution that they need.
